January

The first day of the year

I spent the first day of the year setting up a good environment for a diary, or journal as I prefer to call it. I want to have something similar to a research diary, in which I can document my progress in more detail. This should make it easier for me when it comes to the weekly scrums and the monthly and yearly metas.

It is based on Tufte-LaTeX classes **[tufte-latex]**. It provides three new commands `\diarytime`, `\diarycite` and `\references`. The first command, `\diarytime`, sets a new date in the margin. The second command, `\diarycite`, prints the full bibliography entry for a reference in the margin. The third command, `\references`, prints the list of references for the current section. For this command to work, the `refsection` environment (or the `\newrefsection` command) from Biblatex **[biblatex]** must be used.

[biblatex] biblatex

Picking up the slack

I also did some committing into the repository, trying to sort out what I was doing before Christmas. I committed the start of the crypto and meta parts of my reflections.

19:00

23:30

The second day

Today I did some other stuff, stuff which doesn't require any of the fancy commands.

2nd January 2015

15:20

Another command to the diary

I added the command `\topic` to the journal template—or diary class. This command places the topic name in the margin and adds an entry in the index.
